

NEW REGISTRATION = NEW OPPORTUNITIES

With the introduction of this new registration, new opportunities are bound to arise for the market of Intra Hydrocare. Not every producer of hygiene products has gone through this complicated and extensive ECHA process. The near future will show who will comply with these new guidelines in the European Union. Some products will disappear from the European market and some products will only be admissible in a diluted form.

PHARMA-GRADE PRODUCTION

Processing hydrogen peroxide products is not an easy job. There are only a few manufacturers who have mastered all the techniques to stabilise hydrogen peroxide (we guarantee a shelf-life of 3 years) and know how to safely pack and transport it. At Intracare we are accustomed to work according to pharmaceutical standards. All aspects from purchase, quality control, production, storage and transport are closely monitored. We leave nothing to chance.

LEADER IN (DRINKING) WATER HYGIENE

It is said that imitation is the highest form of flattery; we are seeing an increase in competitors and copycat products on the market. Nevertheless, we know that many other non-ultra-stabilised or industrial hydrogen peroxide products claiming to be effective in maintaining (drinking) water hygiene are not able to prove their claims like we do.

BE SMART, CHOOSE SAFETY!

THE FIRST PRODUCT THAT COMPLIES WITH THE LATEST
EUROPEAN BPR REGISTRATION

Worldwide authorities are imposing more requirements and restrictions to the production and use of disinfectants. To safeguard human, animal and environmental health, products that aren't registered are marked **unsafe** for use.

Intracare values great importance to the safety of all our products in every aspect and therefore, we make no concessions in the value of complying with the latest regulations. This is why our in-house regulatory affairs department has worked hard to obtain an extensive registration portfolio of which we are proud to offer.

Pioneers in future proof solutions

WHAT IS ECHA?

Liability and responsibility are key in the livestock sector, meaning using products which are fulfilling the European legislation law, to prevent recalls and heavy chemicals in the food production chain.

The European Chemicals Agency (ECHA) is an European Union (EU) regulatory authority responsible for implementing and administering chemicals legislation.

SIMPLY PUT, WITHOUT A BPR REGISTRATION, BIOCIDES ARE PROHIBITED TO SELL OR USE IN THE EU.

ECHA provides guidance and assistance to organisations regarding: **1.** chemical legislation compliance; **2.** advances the safe use of chemicals; **3.** provides information about chemicals; and **4.** highlights and addresses chemical concerns. On the ECHA website, you can easily learn more on which biocidal products are registered and for which application they are approved. www.echa.europa.eu

ECHA
EUROPEAN CHEMICALS AGENCY
PT02, PT03, PT04, PT05

ECHA (European Chemicals Agency) implements the EU's chemicals legislation to protect your health and the environment. Intra Hydrocare is registered as an approved biocide with extensive product authorisations.

ECHA BPR REGISTRATION

We are proud to announce that Intra Hydrocare is the **first** product to receive the official new registration. In addition, we are perhaps even prouder to report that our registration has also expanded enormously in terms of application possibilities.

- **PT02** Public health area's (including greenhouses)
- **PT03** Veterinary hygiene
- **PT04** Food and feed area
- **PT05** Drinking water (when animals are present)

1 PT05; APPLICATION VIA DRINKING WATER

Intra Hydrocare is the only biocidal product with a BPR PT05 classification. With a dosage up to 250 ml per 1.000 liters of water, Intra Hydrocare is therefore the sole product in the market that is certified to be used in drinking water whilst animals are present in the poultry house. We recommend: 1-2 days a week with 100 ppm or continuously with 50 ppm.

2 BE AWARE! PRODUCTS MAY NOT HAVE AQUIRED THIS REGISTRATION

It is easy to check whether a product can be used on drinking water for your poultry:

- If a product does not have PT05, it is not allowed in drinking water and use may lead to recalls!
- If a product has PT05 limited to only 5 ml per 1,000 liters at the first drinking nipple, there is no removal of the biofilm and no disinfection capacity.

IMPROVING INTRA HYDROCARE IS AN ONGOING PROCESS

Intra Hydrocare is Intracare's flagship product. For many years, we have been fulfilling a market-leading position worldwide. Farmers and large integrations prefer working with Intra Hydrocare, just for the fact that...

- ✔ **with Intra Hydrocare there is no risk and is safe to use**
- ✔ **they fully comply with laws and regulations**
- ✔ **they are 100% guaranteed with the best results**

In addition to the compliance with BPR registration requirements, our R&D team is continuously improving Intra Hydrocare. Not by adjusting the main ingredients (Intra Hydrocare will always be Intra Hydrocare), but by making subtle adjustments to the substances that Intra Hydrocare contains.

STRONGER DISINFECTING POWER

Over the years, Intra Hydrocare has evolved without compromising the stability and safety of the product for both user and the equipment it is in contact with. Intra Hydrocare now has enhanced disinfecting properties by adding the synergistic element, α -Hydrox without any compromise to the guaranteed superior cleaning properties of the product.

INTRA HYGIENE PROGRAMME
Intra Hydrocare is part of our Intra Hygiene programme. The nr. 1 programme to ensure optimal biosecurity.

INTRA HYGIENE QUICK SCAN
Get in control of contamination risks with real-time water analysis. The Intra Hygiene Quick Scan is the analytical technique of choice for a quick and easy indication of the water quality or the degree of pollution on surfaces.
